

TWO BROTHERS SOFTWARE

screen savers screen saver construction kit

Thank you for purchasing the Two Brothers Software Screen Saver Construction Kit. This instruction manual will have you building screen savers rapidly!

What is included when you install this software:

1. Screen Saver Framework for Distribution
2. Instructions for Distribution
3. Screen Saver Construction Kit Instructions

The following directories will be created on your computer and you will need to know what each of them is for

C:\2bs\ss\

This directory is where you will store the files that you use to create screen savers on the local computer. When creating screen savers, this is the directory that you will have to put your pictures in. You can access this folder by clicking

1. click - My Computer
2. click - C:
3. click – 2bs (it is a folder)
4. click – ss (it is a folder)

C:\2bs\ssfframework\

This folder contains a file name 2bsssfframework.exe. This is a self extracting installer. This is the program that you will have to distribute with your pictures. Once the user installs this program

then they will have to copy the pictures over. You will learn about this later in the instruction manual.

This folder also contains SSimageverify.exe. This is the file that will configure the initial screen saver settings for you and create the files that will place your screen saver files where you need them.

You can access this folder by clicking

1. click - My Computer
2. click - C:
3. click – 2bs (it is a folder)
4. click – ssframework (it is a folder)

Getting started:

To create a screen saver you will need to have some pictures. These pictures must be in .jpg format. If you are taking them from a digital camera, usually they will be in this format, but may need to be converted. It usually is a good idea to have 10 or more pictures, but you may use as few as 2 pictures to create your screen saver.

Once you have selected all of the pictures that you want to use in your screen saver, you will need to get the files named in order. The Two Brothers Software Screen Saver Construction Kit has made this easy for you. The files are named simply:

1.jpg , 2.jpg, 3.jpg, 4.jpg, 5.jpg, 6.jpg and so on.

To rename a file in Windows, you do the following.

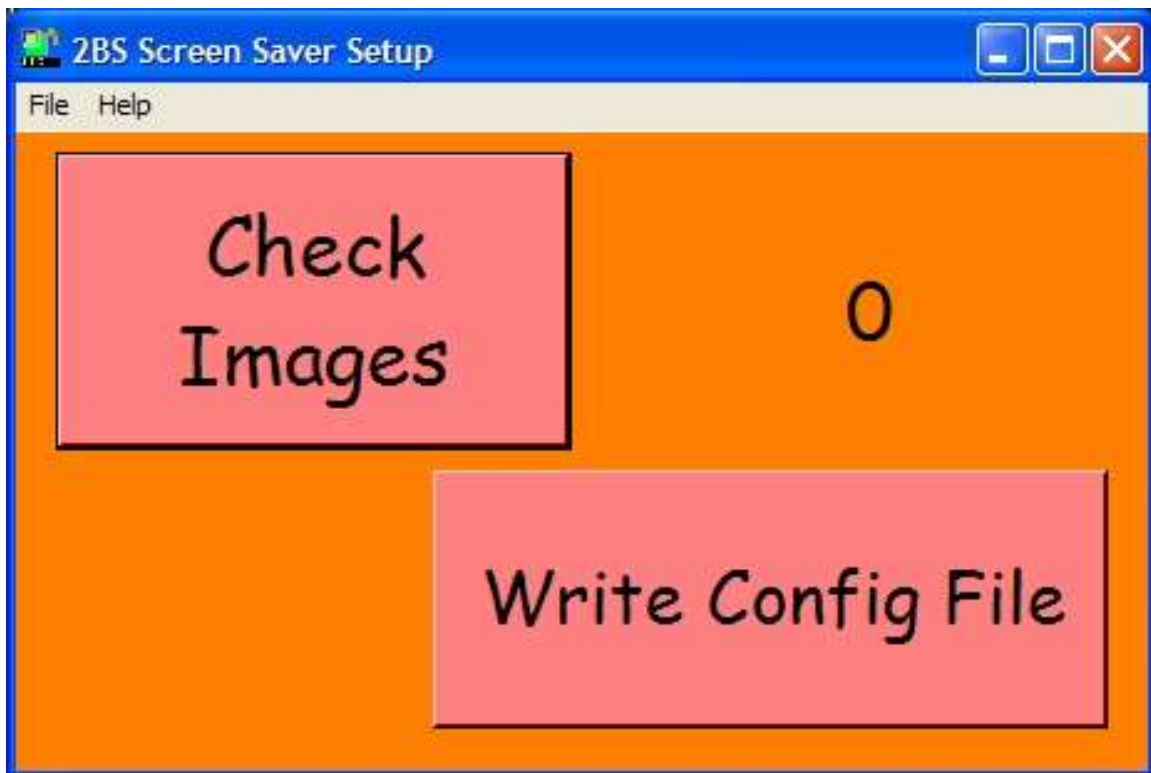

1. Right click the file that you wish to rename
2. Select rename from the list of selections
3. type in the new name of the file (ex 1)
4. Your file should have the same extension if you have enabled viewing extension.

The screen saver will handle up to 255 images named 1.jpg through 255.jpg. It is best to have only the images that you plan to use in the folder that you have created. Having extra images in the folder

will not cause the program to fail, but could cause excess file sizes when distributing the screen saver.

Once all of the images are renamed copy SSImageverify.exe from the framework folder to the folder that you have your images in. Do this by right clicking on SSImageverify.exe, and selecting copy, make sure you do not select 'CUT'. Once you have found your folder with your images in it, right click and select paste.

Once you have copied to your image folder run the SSImageverify program by double-clicking it!

This is what the program will look like. Start by clicking check images. If the image number in the upper right hand corner shows 0 after clicking check images, then there are not any correctly named files in the directory. Make sure that there is a file named 1.jpg in that folder.

If you have properly named files, you will see that the number in the upper right hand corner will change to match the number of files in the folder. This is an example of captured images setup screen.

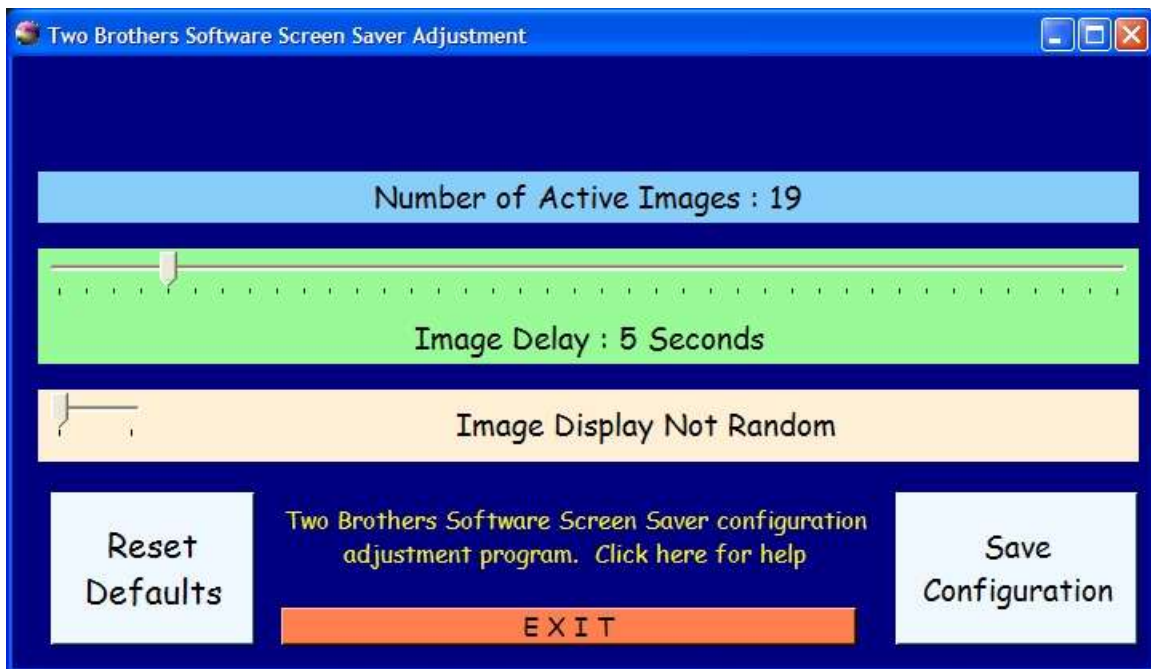

As you can see, this folder has 19 recognized files and the setup screen will also show the upper left hand corner of the last recognized image. If the number of images that the setup noted matches the number of images in your folder, click on write config file. This will write the Screen Saver configuration file, a read me file, and a file named setupSS.bat. The setupSS.bat file is used to place the images in the correct folder in the destination computer or to check them on your computer! The setupSS.bat file must be ran prior to running the screen saver.

The initial configuration will be 5 seconds per image, and they will be in a rotating setup.

Once SetupSS.bat is ran, the screen saver is ready to use. Open the control panel and select Display. From the screen saver menu select 2bsScrSvr. Select how many minutes you want before the screen

saver start, or use a preview to ensure that everything is set up the way you would like.

Once the screen saver is installed, you may change the settings by either selecting the settings file from the start menu, or the control panel.

The number of active images is automatically loaded. The image delay can be selected from 1 second to 40 seconds. The display can be set to random, but that is only recommended when there are more than 100 pictures.

When you are done changing your configuration, click on save configuration. Now your screen saver is ready to go!

If you have questions regarding the installation of the screen saver, please go to <http://screen.twobrotherssoftware.com/contact.php> with any questions that you may have.

Distribution rights:

The owner of the license of the construction kit may freely distribute as many screen savers that they have created with the framework installer. The owner of the license may not distribute any files used to create the screen saver that are proprietary to the construction kit.

Please understand the licensing agreement:
